High Efficiency High Stability High Durability Great Value

Exterior

The clean lines and stylish finish accentuate a durable, waterproof design.

CONVENIENT OPERATION

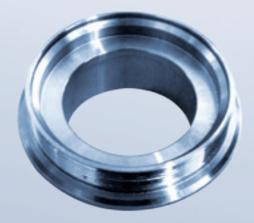

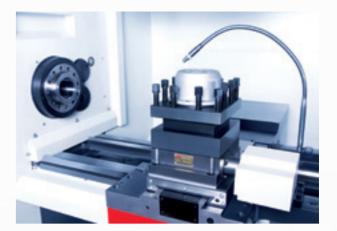

CAK series CNC lathes provide affordable semi-finishing and finishing machining. Their reliability, ease of operation, and practical design make them well-suited to applications in a great variety of industries from automotive to petroleum. CAK series lathes can be found running smoothly in more than 80 countries around the world.

Ease of Operation

The spindle headstock utilizes electronic shifting. Spindle speed and gearing can be directly set by the program, reducing operator labor. The front head turret design is both more convenient and more stable.

Reliability

The powered turret boasts high rigidity. The large diameter gear disk features precise positioning, rigidity, and minimal deformation during heavy cutting. Positioning accuracy is high and sealing very reliable.

Economy & Durability

Large components such as the machine bed and saddle are age-treated. Guideway surfaces are hardened. Sliding surfaces are Rulon-coated to ensure smooth and stable long-term performance.

New Design New Experience

Shifting Headstock The spindle features high speed, high rigidity, and high accuracy. High torque machining is handled well, especially by the available powered spindle configurations. Operation is both easy and quiet.

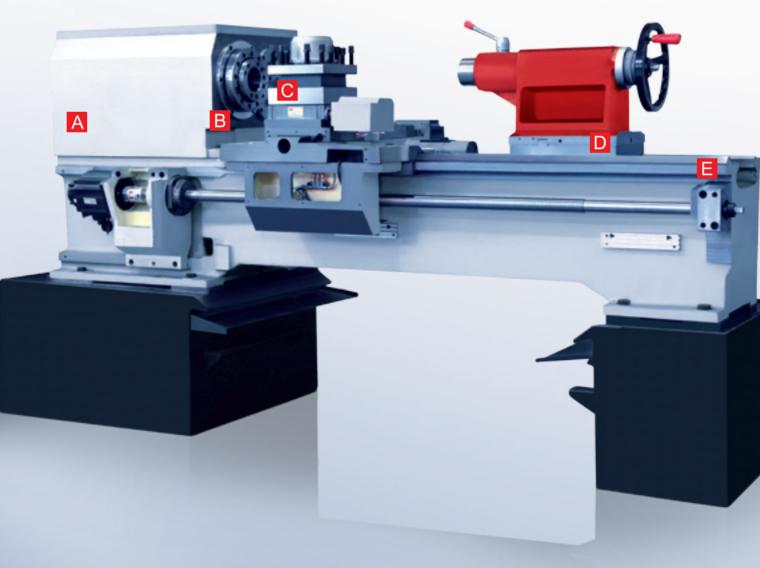

Turret High reliability, high stiffness, and excellent positioning accuracy.

Protection Internal design optimization yields excellent waterproofing and improved chip removal.

Tailstock Improved design increases rigidity.

Guideway The flat bed guideways are heat treated and hardened to a depth of 3mm and rating of HRC52. The saddle and sliding guideway surfaces are Rulon-coated for smoothness and durability.

Door Guideway Linear bearings provide strong guidance and smoother operation.
